NOTICE TO RESIDENTS

Dear Resident/Homeowner

Subject: Directional Drilling – King City East Lands

Please be advised that the King City East (North) Landowners Group will be commencing directional drilling operations effective October 18, 2021. The duration of the works will extend to November 2021 depending on weather conditions. The operation will involve heavy construction equipment, the excavation of the receiving pit for the directional drill, material and equipment storage and contractor parking on Tawes Trail. Due to the location of the receiving pit, access to your driveway will be intermittent. The Township of King and their By-law department have been made aware of these works and are of the understanding that due to the possible obstruction of driveway access that residents will be permitted to park on the street overnight and throughout the day. This work is being done to connect the existing municipal infrastructure on Tawes Trail to the future extension as part of the spine servicing construction. . Construction activities will be restricted to the period of 7:00am to 7:00pm Monday through Saturday, excluding statutory holidays which is in compliance with King Township noise By-Law-81-142. The contractor will be required to implement appropriate erosion and sediment controls, dust control measures, minimize mud tracking onto adjacent arterial roadways and implement protection of existing street trees with fencing.

If you should have any questions or concerns, please contact either of the following.
