On-Site Sewage System

Permit Application Guide

Description

A building permit application for a private on-site sewage system - commonly referred to as a septic system.

General Information

A building permit is required for any repair, upgrade or material alteration to an existing sewage system or to install a new sewage system. A building permit will allow the construction and installation or repair to a private on-site sewage system.

Alteration or Upgrade

If proposed construction, renovation or alteration to a Building includes a change of use, the addition of bedrooms, plumbing fixtures or causes an increase in floor area then an evaluation of the existing sewage system is required. A formal evaluation of the system will determine if the changes will exceed the capacity of any component of the sewage system serving the dwelling unit or building being altered. The evaluation is to include calculations of total daily design of sanitary sewage flow and type of sewage system.

Required Documents and Drawings

Survey or Site Plan

A survey or site plan showing the footprint of the house and all accessory structures, driveway, landscaping and grade elevations. Location of all sewage system components such as tanks, distribution pipe, leaching bed and mantle if applicable, to be dimensioned in relation to existing structures, property lines, water wells on the property and adjacent properties. Note any other pertinent information that would affect the design or use of the system. Clearance distances to be identified and dimensioned to all bodies of water, rivers, watercourses and water wells on adjacent properties. Show existing and proposed grade elevations and slope on leaching bed and swales. Plan must be drawn to scale.

Plans

Plan of proposed sewage system fully dimensioned. Indicate size of septic and/or treatment tank(s), leaching bed, distribution piping and mantle if applicable. Existing and proposed grade elevations to be noted. Include base cut elevation on leaching bed.

Cross Section (filled based leaching beds only)

A cross section of the leaching bed showing grade elevations for: finished grade, stone, pipe, top of filter medium/sand or native soil and base cut. Mantle base slope, if applicable, to be stepped in the direction effluent will flow.

Design Calculations – Sewage System Design Flows

The total daily design of sanitary sewage flow is to be calculated in accordance with the Ontario Building Code Div. B 8.2.1.3 (1) or 8.2.1.3 (2). Provide calculations for the type of system, including size of tank(s), calculations for length of distribution piping, area of stone, leaching bed and loading rates based on percolation time of underlying native soil.

Balanced systems may be permitted however will need to be sealed by a Professional Engineer and be accompanied by a Commitment to General Review and a Final As-Built report sealed by the Professional Engineer.

Site Evaluation

Pursuant to Sentence 8.2.1.2.(1), a site evaluation shall be conducted on every property where a new or replacement sewage system is to be installed. The percolation time of the native soil shall be determined by conducting a minimum of three percolation tests or by a soil engineer's grain size analysis. Both

methods to provide the T-time of the soil classified in accordance with the Unified Soil Classification System as described in MMAH Supplementary Standard SB-6, "Percolation Time and Soil Descriptions".
