

Temporary Watermain

Western, Castlewood, Elmwood Watermain Lining Project

As part of the Contractor's pre-construction activities they will be installing a temporary watermain that will run along the curb line on the street. A hose attached to the temporary by-pass (blue pipe) will be connected to your home with a "Y" connector via the outside hose tap. This allows you to receive water in your home and use your garden hose.

Temporary water interruptions are necessary to complete the work. Residents will be notified in advance of any scheduled interruptions. You may also experience rusty water while work is taking place. If this happens, let the water run until it flows clear.

Multi-residential buildings, such as apartments and condominiums, and commercial and institutional buildings will receive water through the appropriate hook ups from the same temporary water supply system.

The temporary water supply network and the rehabilitated water main will be disinfected prior to hook up to your home in accordance with the Township of King's Procedures for Disinfection of Water Mains.

We recommend that you temporarily disconnect any water treatment system, such as water softeners or filters, water-cooled air conditioners or any similar plumbing fixtures, as they may be damaged during the construction. Automatic lawn sprinkler systems may not operate properly while work is taking place, manual watering may be necessary.

We appreciate your cooperation. Every attempt will be made to minimize interference with local activities. Please exercise caution around construction, equipment, and the temporary water main system.

Please see below figure of the "Y" connections.

Emergency Contact Information:

Daytime (7:00am – 6:00pm): 1-(416)-742-3713

Afterhours Monday – Thursday (6:00pm – 7:00am): 1-(855)-530-8592 Toll Free

Afterhours Friday (6:00pm) – Monday (5:00am): (416) 356-4614 or
